

4-core optical cable structure

1075KWHH ESS

Overview

A 4-core fiber optic cable is a type of cable that contains four individual optical fibers within a single protective jacket. These fibers are used to transmit data as light signals, offering high-speed data transfer capabilities over long distances with minimal loss. It is a cylinder of glass or plastic that runs along the. 4 Core Optical Fiber Cable Specification Optical Fiber Cable 4 Core Key Features ● LC to LC or SC to SC ● Single-mode /multimode for option ● OM3 for multimode ● Optical Fiber 4 Cores Inside ● Compatible with all standard fibre optic equipment and connectors ● Stainless Steel sheathed and metal. An optical fiber cable is a complex structure designed to protect fragile glass fibers that transmit digital data using light signals. In most modern applications, these are Single-Mode (G).
