

48-core optical cable turning radius

Overview

During the installation process, maintain a minimum bend radius of 20 times the cable diameter under tension, and 10 times after installation. ations, complying with IEC standards for low smoke/zero halogen and Eu oClass (Cca or B2ca) for fire protection. The cable shall also be water-blocked for use in outdoor environments. It shall s cable can be used for outdoor data communications connections including CATV, telecom trunk and ac OS2. Fiber optic cable bend radius is a critical mechanical parameter that determines how sharply a cable can be bent without risking microbending, macrobending, signal loss, or long-term structural fatigue. That radius varies according to the particular fiber's design, but historically, most fibers are optically unaffected by bends 30 mm radius.
