

Access switch port speed limiting

Overview

Use the `srr-queue bandwidth` command on Cisco switches. You use it as a percentage of a port's speed. So if you set the port speed to 100Mb, then set it to 10% to get 10Mb, or if you want to limit a port to 1Mb, set the port to a 10Mb speed and set the speed to just 10%. UniFi offers advanced Quality of Service (QoS) and Traffic Shaping tools that let you prioritize critical applications and limit nonessential traffic, helping ensure optimal performance across all connected devices. If you're deploying A/V equipment and want to use pre-configured Port Profiles for. You can limit the bandwidth on an egress port. Smart. Port rate limiting helps control undesirable traffic. Its purpose is to allow enough unicast, broadcast, multicast, and ICMP traffic for the network to function properly, while preventing flooding and traffic storms.
