

Airport server rack cold aisle dimensions

Overview

The ANSI/TIA/EIA-942-A (data center) standard recommends a cold aisle width of 1.2 meters (which is equivalent to two floor tiles) to allow a perforated tile to be placed in front of each cabinet which allows for cold air to be delivered to the cabinet front. The air inlet temperature is controlled, there is no return of hot air on the. Maximum Aisle Length: When equipment cabinets form a continuous row, the aisle length should not exceed 16 meters. Hot. When room for aisles, power distribution equipment, air conditioners, and other equipment is included, floor space utilization can equal 20 square feet (1. m), or five tiles, per cabinet. Cold air is delivered into this aisle through: Servers pull this cold air into their front. urr DCM cabinets with 4' or 6' aisles, and requires a uniform row. 5 Flexibility Modular kits make it easy to adjust the system if aisle configurations change.
