

Applications of 24-core multimode optical cable

Overview

This advanced cable features 24 cores, allowing for a significant increase in data capacity and making it an ideal solution for data centers, enterprise networks, and telecommunications systems. Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Multi-mode fiber has a fairly large core diameter that enables multiple light modes to be. Enter the 24 strand multimode fiber optic cable, a key player in the vast and intricate world of network infrastructure. But what makes it so special, and why should you care?

Buckle up; we're about to get into the nitty-gritty. What is Fiber Optic Cable, Anyway?

Before we zoom into the 24 strand. This Applications Engineering Note (AE Note) discusses the criteria for properly selecting the optimal multimode fiber (MMF) for enterprise applications.
