

Are all electrical distribution boxes required to be made of stainless steel

Overview

Stainless steel boxes are required for use as electrical enclosures where there is a significant risk of environmental corrosion. Typically this can be in applications close to the coast, estuaries and in some cases even inland where high salinity water can be a problem. Let's explore the essential material requirements that ensure these boxes are safe, reliable, and long-lasting. Impact Resistance. You can find distribution boxes made from various distribution box materials such as steel, aluminum, PVC, polycarbonate, high-density polyethylene, and thermoset plastics like SMC. For example, you may need flame retardant features. The. Aluminum options are surprisingly lightweight - about 40% lighter than steel - while stainless steel remains the undisputed corrosion champion but will make your wallet significantly lighter too. (c) IEC 60529 Type IP 54 or better, manufactured of stainless steel (Type 304 or better), copper free cast aluminum, or plastic (including fiberglass).
