

Assembly Method for Waterproof Fiber Optic Connectors

Overview

This video demonstrates how to assemble a waterproof fiber optic fast connector for outdoor and FTTH applications. The process focuses on quick field termination with reliable sealing performance for harsh environments. Their defining feature is the mechanical sealing system surrounding the connector interface, which isolates the ferrule, adapter sleeve, and mating zone. Fiber Insert – Insert and turn technical, making sure that only epoxy overflow. Crimping – Collapsing or crimping the wires with a suitable tool. Fiber Scribe & Break – Manually snap with the help of scribe pen [talking about excess fiber]. This Standard may also apply to the Jet Propulsion Laboratory other contractors, grant recipients, or parties to agreements only to the extent specified or referenced in their contracts, grants, a ontain.
