

Cable tray box sealing materials

Overview

The systems consist of mineral fiber boards, ablative fire protection coating and joint sealant. They can be applied as single-panel penetration seal (fire resistance duration up to EI60) and double-panel fire stop (up to EI120). Seal cable penetrations with our modular firestop solutions, designed to create water-, smoke- and gas-tight barriers in energy and industry projects both onshore and offshore. Just peel off layers until the module fits. The built in spare capacity makes it easy to open up the seal and change. Cables, cable bundles, conduits, bundles of conduits, empty pipes, cable trays and cable ladders may also pass through penetration seals in walls and floors and should be taken into consideration during all phases of design and application. However, individual cables and cable bundles as well as electrical installation pipes can. AF BAGS are intumescent and ablative fireproof pillows certified under EN 1366-3 for sealing up to EI 240 of cable tray penetrations. Inside a non-combustible fibreglass casing, a high-density concentrate of intumescent components, inert thermal insulators and products with gradual release of. Service penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them.
