

Cable trays need to be laid under the cable trench

Overview

Cable trays are above-ground systems that support and organize cables. The biggest difference is how they're installed—trays are exposed, trenches are buried. While they serve the common purpose of routing and securing cables, these systems differ in design, application, installation, and maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. ② At cable branches and joints. ③ Major changes in pipeline direction or cables transitioning from pipes to directly buried locations ④ Necessary reinforcement and.
