

Distribution Box Maintenance Regulations

Overview

The SFG20 44-07 standard requires specific 6-monthly checks that include visual inspections for physical damage, verification of proper labelling, checking protective devices, identifying overheating issues, and ensuring overall functionality of distribution boards. Routine maintenance ensures electrical safety, extends asset life, and provides assurance that systems will perform when required. NOTE: Maintenance should only be carried out by a qualified Maintenance Contractor, following all standard safety process and procedures such as isolating power. Premier Technical Services Group Ltd (PTSG) has identified a significant compliance gap affecting many facilities management companies and building operators across the UK. The issue concerns SFG20 44-07 requirements for distribution board maintenance, which are often overlooked in standard. Grab your flashlight and tools—we're going in! 1. Visual Inspection: Seeing What Others Miss Before touching anything, use your eyes. Look for: Burn marks or discoloration (that ugly brown or black tint that screams "I overheated!") 2. Connection Tightening: The Power of the Right Grip Those. A significant number of facilities management providers across the UK are unknowingly failing to meet required maintenance standards for electrical distribution boards, according to industry experts. Power distribution & circuit protection depend on it. LV intrusive switchboards accept power from the utility & generator & distribute it to building circuits. For residential buildings, the standards DIN VDE 0100-410 (protection against electric shock), DIN VDE 0100-420 (protection against thermal effects) and DIN VDE.
