

# Do fireproof cable trays have anti-corrosion properties

## Overview

FRP cable trays are constructed from composite materials, typically a combination of fiberglass and resin. They offer several advantages, including corrosion resistance, electrical insulation, and lightweight design. Common materials include: Stainless Steel: Legrand wiremesh cable trays are resistant to corrosion thanks to the various available surface treatments. There is a solution for each type of environment. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl. In the construction and design of electrical systems, anti-corrosive cable trays selection plays a crucial role in ensuring both the durability and safety of the entire system. Cable trays, which provide vital support and protection for electrical wiring, must be chosen with consideration for the. The durability of cable tray systems is critical in installations where environmental conditions pose a high risk of corrosion.
