

Does the light-changing module need to be configured

Overview

If you did not enter a static IP, the module will automatically obtain a dynamic IP from the router. You can check it in the router configuration or in the settings page, if the Access Point is still enabled. The Home energy storage system consists of photovoltaic panels, inverters, battery packs, master control switches, Gatewa panels into battery packs. Or alternatively, the electricity in the photovoltaic system and the battery pack can be converted into alternating current. We'll start by explaining the different components of the system, such as DALI ballasts, DALI controllers, and DALI sensors, and how they work together to create a seamless lighting control solution. We'll then show you how to install and configure the system, including the necessary wiring and. Distributed intelligence means that all lighting control actions, such as turning on/off or dimming lights, are carried out locally within each individual lighting zone. This feature reduces the wiring requirements and associated labor costs. For Galvo devices, please see Galvo Settings.
