

# Fan-shaped optical cable

## Overview

Fanout cables take the optical signals from a multi-fiber MTP/MPO connector and distribute them into individual simplex connections. Each fiber within the cable corresponds to a single connection, making it easier to integrate with standard networking hardware like patch panels or. Figure 1. 1 The stainless steel sleeve at the end of the bundle's common leg is engraved with the core size, numerical aperture (NA), wavelength range, and item number. Thorlabs' 1-to-4 Fan-Out Fiber Optic Bundles consist of four high-grade optical fibers. They are arranged in a round or linear. Corning fan-out riser cables are designed for use in building backbone and horizontal cabling. It allows 250 $\mu$ m fibers from loose-tube or ribbon cables to be transitioned into 900 $\mu$ m tight-buffered strands, perfect for. 1. MPO-LC/SC pre-terminated fan-shaped fiber means that one end uses MPO single-ended 12-core or 24-core connectors, while the other end uses LC/SC connectors. This product is mainly used in the pre-termination module box to connect the pre-termination backbone optical.
