

Fiber Optic Cable Engineering Acceptance Standards Reference

Overview

For standardized fiber optics and premises cabling, standards are now under the auspices of the TIA Technical Committee TR-42 for the US and ISO JTC 1 internationally which also handles premises or structured cabling, including unshielded twisted pair copper and fiber optics. Telecommunications Industry Association (TIA) and ISO/IEC cabling standards for fiber optics and structured cabling, for example, are written by manufacturers for manufacturers, and as such are much more useful to manufacturers of cables, connecting hardware, networking electronics and test. ANSI/TIA-568. 3-E “Optical Fiber Cabling and Components Standard” was developed by the TIA TR-42. Scope: This Standard specifies performance, transmission, and test and measurement requirements for premises optical fiber cable. 'A document established by consensus and approved by a recognized body that provides for common and repeated use, rules, guidelines or characteristics for activities or their results, aimed at the achievement of the optimum degree of order in a given context'. These standards focus on things like connector geometry, ferrule cleaning, and insertion loss testing. Take a closer look inside our advanced fiber optic production facility — where innovation, precision, and quality come to life. Users of this publication are encouraged to participate in the development of future revisions. Line Drawings and Illustrations.
