

Fiber optic cable laying inside the office

Overview

Indoor cables can be installed in raceways, cable trays above ceilings or under floors, placed in hangers, pulled into conduit or innerduct or blown through special ducts with compressed gas. The installation process will depend on the nature of the installation and the type of. Running copper Ethernet cables and coax cables outdoors can put your entire home or office network at risk for power surges from lightning strikes. In many cases, this can instantly destroy all. Fiber optic cables are categorized based on their deployment environment: indoor fiber optic cables and outdoor fiber optic cables. Indoor fiber optic cables are commonly used in buildings, offices. Minimize mechanical pressure on the outer sheath at crossing points: (armoured) cables crossing each other generate points of high pressure, so it is important when laying in figure 8 loops it is done in a correct way. It also includes professional.
