

Fiber optic patch cords flexible or rigid

Overview

A fiber patch cable is a fiber optic cable with connectors on both ends. They are also called fiber jumpers. These connectors (such as LC, SC, FC, or ST) enable quick, tool-free connection to network devices, making them. This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization and global supply. While backbone fiber cables act as the main arteries carrying massive volumes of optical signals, fiber optic patch cords function as capillaries—precisely and flexibly delivering signals to. What is a Fiber Optic Patch Cord?

A fiber optic patch cord —also known as a fiber jumper—is a fiber cable terminated with connectors on both ends. Used to connect optical transceivers ↔ transceivers, switches ↔ patch panels, or cross-connect panels.

Fiber-optic patch cord

Patch cords are classified by transmission medium, connector construction, and construction of the connector's inserted core cover. Single-mode fiber is generally yellow, with a blue connector, and a longer transmission distance. Multi-mode fiber is generally orange or grey, with a cream or black connector, and a shorter transmission distance.
