

Fiber optic patch cords should never be unplugged directly

Overview

For the safety of your eyes and vision, never ever look directly at any live cable's endpoint. Remember! Frequent plugging and removal of fiber patch cords will result in the wear and tear of the connector's end-faces. Adhere to the best housekeeping practices and. Fiber optic patch cords can be used to connect a variety of network equipment and devices with fiber optic interfaces, such as optical modules, adapter panels, wiring boxes, wavelength division multiplexers and demultiplexers, fiber optic transceivers and so on. Always avoid looking directly into an energized optical fiber, and never attach a microscope or other magnifying device to an energized optical fiber. Fiber patch cables can be used with many network devices, such as optical transceiver modules, fiber adapter panels, fiber cassettes, media converters, and other products having fiber optic interfaces. This guide addresses expert-certified best practices applied by professionals in the telecommunications, data.
