

Fluorescence Spectrometer Detector

Overview

Spectrofluorometers or plate readers with fluorescence detection typically offer greater sensitivity and a wider dynamic range compared to absorbance detection. Because many reagents can be fluorescently labeled, spectrofluorometers are used to detect many biological and chemical. Fluorescence spectroscopy (also known as fluorimetry or spectrofluorometry) is a type of electromagnetic spectroscopy that analyzes fluorescence from a sample. Photo-bleaching may be experienced with certain thin coatings and compounds in bioresearch, cell-biology, molecular biology, immunology, enzymology, tissue and protein samples; FL 6500. The Qubit 4 Fluorometer is the latest version of the popular Qubit fluorometer designed to accurately measure DNA, RNA, and protein quantity, and now also RNA integrity and quality, using the highly sensitive Qubit assays.
