

Function of Relay Protection Backend

Overview

Protection relay is an electromechanical monitoring safety device which senses fault and provide trip signal to the breaker as per set value in LT and HT panel.

Abstract: Protective relays and devices. Long term cost reduction (TCO) for trainings
and maintenance by reduce variety of relays A fast and selective arc fault mitigation
for air-insulated LV & MV switchgear and Relion protection and control relays and
sensor technology protect staff and plant facilities for many years. Static Relays: Use
electronic components without moving parts. It initiates the operation of circuit
breakers to isolate the affected section. This prevents damage to equipment, reduces
downtime, and safeguards. The rectangular devices are test connection blocks, used
for testing and isolation of instrument transformer circuits.
