

Functional Principle of Fire Cable Trays

Overview

They Make Safe Paths for Fire System Wires Cable trays are made from materials that resist fire. This means the fire system can still get power and. Fire protection systems find fires, raise the alarm, control the fire, and put it out. Cable trays play a key part in. ProReact Linear Heat Detection (LHD) offers a proven solution. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. FireMaster® products insulate cable trays carrying instrument control cables to ensure that the cables can operate long enough to allow process shut down during fires.
