

GPA type optical cable terminal box

Overview

Fiber optic distribution box FODB-12GPA either called FTTH termination box, designed for terminating feeding optical cable and connect last mile cables as fiber optical cords, pigtail cords etc during Fiber to home line constructions. The terminal boxes are divided into a wall-mounting type, a fixed (rack-mounting) and flexible (drawing-out, pushing into) type Terminal Box, which mainly are used in. Splice boxes and splice distributors are essential for a reliable fiber optic cabling system and serve as a connecting point between the fiber optic installation cable and the in-house network. High quality components ensure a secure and stable operation. These components are integral parts of the fiber optic architecture, as they connect the cable from the network. In a highly competitive market, HL Global approach is to satisfy all the different types of optical fiber terminal boxes.
