

High Beam Module

Overview

HIGHBEAM is a CANBUS module that detects the high beam signal from the car's CAN network. In modern vehicles, the installation of additional high beam headlights is often difficult because the appropriate switching signal cannot be found in the electrical circuit. The CANM8 CANNECT HIGHBEAM interface is a single output CAN Bus interface which provides a quick solution for detecting high beam activity on vehicles which feature CAN Bus wiring. Outputs 12v (1A max) when the high beam is active. By connecting to the CAN. Thinbilite is an ultra-compact automotive lighting module, a thin bi-function module with lens height about 15mm, combining low and high beam in a single device. Highly compact module to reduce headlamp size while allowing to extend signalling function all around. An improved vision makes driving at night much safer and more comfortable.
