Home electrical panel lacks ground wire

Overview

If you find there is no ground wire in your electrical system, consider replacing outdated two-prong outlets, installing Ground Fault Circuit Interrupters (GFCIs), or exploring grounding through metal conduit or armored cable. This historical wiring practice often leads to confusion for current homeowners. Identifying and addressing ungrounded circuits is an important step in modernizing an older home's infrastructure. One crucial element in ensuring the safety of your electrical setup is the presence of a ground wire. What Happens if Grounding is Not Done or Not Done Properly?

Although I've luckily never seen it in my 20-plus years. To fix a house with no ground wire, you need to rewire the entire home by installing a grounding rod and connecting it to the electrical panel.
