

How much fiber optic cable should be stripped from the connector

Overview

The furcation tubing should be cut so that it is approximately 26 mm longer than the desired length, allowing 13 mm per end to be stripped prior to insertion into each connector. Kevlar Scissors (Item # T865) can be used to easily cut through the protective Kevlar threads. Properly stripping the cable and preparing the fibre ends ensures a clean and secure connection, leading to optimal signal transmission and network performance. In this informative guide, we'll walk you through the step-by-step process of stripping and preparing fibre optic cable for termination. Each type of fiber optic cable requires a special technique to remove the jacket, strength members and expose the fibers for splicing or termination. 2 Corning Cable Systems ribbon interconnect cables are lightweight, flame retardant cables designed for high performance transmission of digital and analog signals in process. Whether it is indoor or outdoor fiber-optic (FO) cable, using a step-by-step approach reduces the chance of fiber damage while ensuring the performance of fibers.
