

How to check the optical port attenuation on an H3C switch

Overview

Run the following command to view the Digital Diagnostic Monitoring (DDM) data of the optical module: `show transceiver diagnosis interface <interface-type> <interface-number>` The output provides real-time diagnostic metrics and their corresponding threshold ranges. The following uses the Moduletek QSFP-40G-LR4 module connected to an H3C S6820 switch as an example to introduce how to read information of the connected optical module on an H3C switch. Figure 1 Schematic Diagram of Optical Module Connected to Switch 1. The value ranges from 1 to 100 (in step of 1) and defaults to 100. The smaller the ratio is, the less broadcast traffic is allowed. max-pps: Maximum number of broadcast packets allowed to be received. For inquiries about our products or pricelist, please leave your information with us and we will be in touch with in 24 hours. © Copyright: 2026 ETU-Link Technology CO. Enter the following command and press the Enter key: Viewing CPU Usage on H3C Switch See also How to Find Local IP Address?

Access the switch's CLI console.
