

How to connect the fusion splice tray and optical fiber

Overview

Put the optical fiber into the V-shaped groove of the fusion splicer, carefully press the optical fiber pin and the optical fiber fixture, and set the position of the optical fiber in the pin according to the length of the fiber laser cutting. The guide provides the complete workflow, covering safety precautions, tool selection, fiber preparation, fusion operation, quality control, and. Fiber cable splicing is the process of permanently joining two optical fibers end-to-end to allow light signals to pass through with minimal loss. Unlike fiber connectors, which can be plugged and unplugged, splicing creates a fixed connection that is typically more stable and has lower insertion. Once you've prepared your loose tube fibers, it's time to splice it to another cable or some pigtails and in both cases. In the case of fusion splicing, the fibers are precisely.
