

# How to determine the wire sequence of a 48-core optical cable

## Overview

Under the TIA/EIA-598-C standard, the universal 12-color sequence is: 1-Blue, 2-Orange, 3-Green, 4-Brown, 5-Slate (Gray), 6-White, 7-Red, 8-Black, 9-Yellow, 10-Violet, 11-Rose, and 12-Aqua. This sequence repeats for cables with more than 12 fibers. The optical fiber elements are typically individually coated with layers and contained in a protective tube suitable for the environment where the cable will be deployed. (48, 96, or 144 fibers), the industry uses a “Tube and Fiber” system. It consists of lightning protection and high-speed optical communication capabilities within a single unit. (The pairs in a 5 pairs cable are coloured as pairs 1-5 in a 10 pairs. STLTM ARMOUR-LITE® Multitube Single Jacket Fibre Optic Cables are typically used for outside plant (OSP) applications. The cables comply to the following standards IEC 60793, IEC 60794, ITU-T, RoHS, REACH. In terminal boxes and closures, core count is directly related to: Common configurations include: These configurations do not represent performance differences, but rather.
