

How to enable fiber optic on a Huawei switch

Overview

Execute the command “combo enable fiber” in interface mode to switch to the optical interface; on the contrary, “undo combo enable fiber” switches to the default electrical interface state. Enter system view, return user view with return command. Info: Set the same config on the. This section describes how to configure attributes for an optical interface. The interface split function allows a high-bandwidth physical interface on the device to be configured as multiple independent low-bandwidth interfaces. Related Information Video Identify a Huawei-Certified Optical Module Run the display transceiver [interface interface-type interface-number | slot slot-id] [verbose]. Commands provided in this section and all the parameters in the commands are supported by all switch models by default, unless otherwise specified. Hardware failures: include hardware. How Can I Determine Whether an Optical Module Is Identified by the Switch or Check the Transmit Power of an Optical Module?

Can an XFP Optical Module Interconnect with an SFP+ Optical Module?

What Is a Single-Fiber Bidirectional Optical Module?

Can a Multi-mode Optical Module Use a Single-Mode.
