

How to fasten the cable tray plate

Overview

The fittings can be fastened to the cable tray rail either with double clamps of type DOP A2 or with truss-head bolts of type FRS and combination nuts. The exceptions to this are vertical bends, adjustable bend elements and fittings with a side height of 35 mm. The screw-on cable trays are available in perforated (MKS, SKS, DKS, EKS) to maintain spacing or to keep cables in place when the tray is bent to the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is intended for instrumentation and control applications that require. Installing a cable tray system requires careful planning to ensure it can support the weight of the cables and adheres to electrical safety codes. Choosing the right one depends on project conditions, load. Find out how you can install cable trays faster and easier with our innovative patented product Hermi® Fast Joint.
