If the rack and everything is set up correctly you will keep the hot air exhausting out one side and only cool air coming in the other then even stuff that is passive can benefit from the overall flow. In Part 1 of this mini project, I show how I extended the existing ductwork to better direct cool air in front of the RMTechCentral server rack. The goal is to improve cold airflow and prepare for fan installation to push that air exactly where it's needed. Stay tuned for Part 2, where I'll add. Making a DIY server rack setup is an economical method to handle your {hardware}, however overheating stays a vital problem. 4 Passive Cooling (Airflow Management, Blank Panels) Passive cooling involves managing airflow. 1.
