

Intelligent Fiber Optic Cable Laying

Overview

AI-powered robots can lay fiber optic cables in harsh environments (underwater, underground, or in space). Self-navigating robotic systems use AI to analyze terrain and optimize fiber deployment routes. Our intelligent NODIG systems ensure rapid expansion by laying the protection pipes and fibre optic cables underground - right up to. The fiber optic network is expanding at an unprecedented pace, demanding more sophisticated planning and management strategies. To keep up with this rapid growth, the integration of cutting-edge technologies like Artificial Intelligence (AI) and Machine Learning (ML) is essential for optimizing. Distributed Acoustic Sensing converts a standard single mode telecoms fibre optic cable into an array of distributed sensors to deliver spatially and temporally rich traffic management information.
