Aiming at the pain points such as the difficulty of real-time management and control of distribution station operation, the difficulty of station operation and maintenance management, and the low efficiency of station business operation, this paper proposes the “Cloud layer IoT. Siemens Distribution Automation functionality ranges from monitoring to fully automated applications, including FLISR (fault location, isolation and service restoration), voltage and reactive power compensation and power quality. However, for long time, the maintenance teams in the field and the experts in the power companies are divided. Historically, distribution boxes served as simple protective enclosures housing circuit breakers and fuses to. Intelligent monitoring and O&M solution for distribution station collects data through various sensors and transmits it to the TruGem All-in-One Edge Computing Gateway in real time.
