

Introduction to Fire Protection Technology for Cable Trays

Overview

They Make Safe Paths for Fire System Wires Cable trays are made from materials that resist fire. This means the fire system can still get power and send. ProReact Linear Heat Detection (LHD) offers a proven solution. Engineered for continuous monitoring and early warning, our cable-based detection system is ideal for protecting cable trays—whether single-tier, multi-tier, or densely packed. Cable trays play a key part in keeping fire protection systems working. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. This white paper describes the use of sensor cable systems from LISTEC GmbH for the early detection of temperature-related hazards in cable trays and supply ducts. When exposed to a fire's heat, the tube ruptures at the ignition point, triggering immediate discharge.
