

Main ONT Node Devices in GPON

Overview

GPON (Gigabit Passive Optical Network) consists of OLT (Optical Line Terminal), ONU (Optical Network Unit), and passive optical splitters. Refers to the optical network unit, which is the terminal device connected to the fiber branch. There are no specific requirements for this document. This document is not restricted to specific software and hardware versions. The information in this document was created from the devices in a. A network PON (Passive Optical Network) is a fiber optic distribution infrastructure that uses no active equipment between the operator's central office and the subscriber's premises. The ONT G-010G-A provides a Gigabit Ethernet (GigE) user interface and delivers premium service experience for all services, including data and video.
