

Method for cleaning the input port of the optical power meter

Overview

Sensor and Ports: Regularly clean the sensor and input ports using isopropyl alcohol and lint-free wipes to remove any dust or contaminants. **Storage:** Store the optical power meter in a clean, dry environment when not in use. Discover the key to pristine fiber optic testing with this tutorial on how to clean the connector of an EXFO PXM power meter. Uncover valuable insights and expert tips to optimize your P. **Select Wavelength:** Use the wavelength selection feature to set the wavelength corresponding to the fiber optic system under test. This is typically done through a menu or a dedicated button. Consistent procedures ensure accuracy. Verify light travels from. The inspection and cleaning process is straightforward, but care needs to be taken so as not to damage the fiber ferrules of the CertiFiber Pro® Output Ports, which are the only contact ports in the module.
