

# Network Security Equipment Performance Analysis

## Overview

Five-step methodology: List assets, map data flows using Nmap/Wireshark, identify threats with MITRE ATT&CK, assess impact, recommend technical mitigations. Compliance mandates: HIPAA, ISO, NIST, PCI DSS, GDPR require regular security assessments to maintain compliance and. Use Secure Network Analytics with Identity Services Engine (ISE) to define smarter segmentation policies, create custom alerts to detect unauthorized access, and ensure compliance. Cisco Secure Network Analytics + Splunk delivers deep visibility, optimized data management, and advanced threat. This article provides a comprehensive look at how Network Security Performance Analysts leverage business intelligence and data analytics to monitor networks for unauthorized access. Risk. Network device monitoring is the process of managing and analyzing hardware devices within a network. This includes routers, switches, firewalls, and servers. Vendor supplied tools like other networks analyzers include Wireshark which is a network protocol analyzer software and SolarWinds Network Performance Monitor also give full features of monitoring.
