

New Off-Grid Power System Solution for Spain

Overview

Spanish engineering group Táctica Industrial has introduced an off-grid photovoltaic-to-hydrogen system designed to produce green hydrogen at an estimated €400/kW using modular alkaline electrolyzers without inverters or grid connection. Off-grid solar systems are becoming increasingly popular in Spain, especially in rural or remote areas with unreliable electricity supply. The Cruz de los Caminos project has a capacity of 51. Matrix Renewables has connected two new renewable energy projects, Cruz de los Caminos and Piedra. In Spain, land is classified as urbanizable (buildable) or rústico/rural (non-urbanizable). Rural land is primarily intended for agriculture, forestry, or conservation and comes with strict restrictions on permanent construction. Permanent houses are generally not allowed on rural plots without. A key component is the new SMA Sunny Island X (SI X) battery inverter, which impresses with its high power class and application range for projects from 250 kW up to 2 MW. We work closely with our customers to develop perfect solutions for their individual use cases and renewable energy. In a significant stride towards sustainable energy, Spain is set to unveil a groundbreaking green hydrogen electrolyser system designed to operate exclusively on off-grid solar power. This innovative technology is poised to play a crucial role in Spain's ambitious plans to become a leading exporter. Amosolar has engineered and deployed a robust 5MW off-grid solar system in Spain, utilizing our reliable AS380M-72 photovoltaic modules.
