

ONU Optical Network Unit QSFP RoHS

Overview

The ONU is a key customer-side device in PONs. It was developed in the late 1990s and early 2000s, converting optical signals from the ISP into electrical signals usable by routers, computers, IP phones, or Wi-Fi access points. MaxLinear's Broadband Forum 247i4 certified PRX SoCs provide a clear path to scale from gigabit to 10G services with a wide portfolio of fiber access solutions. Our fiber system on chip products can be used in both ITU-T and IEEE PON environments. (GPON, XG-PON, XGS-PON, NG-PON2, 10G EPON). From delivering gigabit Internet to homes, supporting 5G backhaul, to enabling enterprise cloud connectivity, fiber access networks are expanding. As PON adoption grows, the importance of having a range of Optical Networking Units (ONUs) is even more critical to serve the diverse set of use cases operators are facing. Passive. A gigabit passive optical network (G-PON) comprises optical line terminals (OLTs) and optical network units (ONUs), and Murata's lineup of products for use in ONUs is introduced here. An Optical Network Unit (ONU) is a device used in fiber-optic communication networks, specifically in Passive Optical Network (PON) systems.
