

One bridge with nine spans

Overview

Also called as the Bridge in the sky, it is a beautiful and unsophisticated viaduct train bridge that stretches across around 91 meters with a total of 9 spans amidst the lushly vegetated foliage on both sides. The 1915 Çanakkale Bridge in Turkey, opened in 2022, has the longest central span (2,023 m) of any suspension bridge. It crosses the Dardanelles in Turkey. The following 2 files are in this category, out of 2 total. Suspension bridges are measured a bit differently than regular ones, using the farthest support beams on either end to calculate the “main span” of the bridge instead of going by the shore-to-shore measurement of the entire structure. As a result, we'll be ranking these 10 longest suspension. The longest suspension bridges in the world showcase record-breaking main spans, advanced engineering, and real-world impact on global transport. It's an arch bridge from the 13th century BC, originally made for chariots.
