

Optical Cable ONU

Overview

ONU stands for Optical Network Unit. In simple terms, it's a device that receives the optical signal from your Internet Service Provider (ISP) via a fiber optic cable and converts it into electrical signals that your router, computer, phone, and other devices can understand and. ONU stands for Optical Network Unit. An ONT and an ONU are the same things. But if you want to get technical, there is one difference and that is. As a user side device of FTTX application, ONU is a high bandwidth and high cost-effective terminal equipment for the transition from "copper cable era" to "optical fiber age". Born for efficient last-mile connectivity, it powers broadband services, smart cities, and diverse industries. As global demand for Fiber-to-the-Home (FTTH) expands, ONUs have become essential for delivering reliable broadband to homes. A Passive Optical Network (PON) employs fiber optics and splitters to distribute data from a single source to multiple users using a point-to-multipoint topology.
