

Optical module CRC packet loss

Overview

Check Physical Health First: Many CRC or drop issues can stem from faulty cables, SFPs, or adapters. **Store-and-Forward:** Cut-through devices can pass corrupted frames onward, so the actual error source might be upstream. However, the display interface command output shows that packet loss occurs on the corresponding interface due to CRC errors. The receive optical power of the optical module is abnormal. If CRC error packets are continuously generated on an interface, the possible cause is that the transmission medium is faulty. For example, the connected twisted pair or optical fiber is faulty, or the. This guide provides a deep technical overview of how to troubleshoot sfp optical transceivers and other optical transceivers module types effectively in 2025. **PER Calculation:** The Packet Error Rate (PER) refers to the ratio of the number of erroneously received packets to the total number of packets received. You should have familiarity with: All.

Advanced Troubleshooting Guide for Optical Transceiver (2025)

Common Transceiver Symptoms Link down or unstable Frame check sequence (FCS)/CRC errors Intermittent packet drops or retries Unsupported module or "unqualified optic" messages in logs

Feb 21, 2026

The Transmit Optical Power of an Optical Module Is Normal, But

The display interface transceiver verbose command output in the interface view shows that the transmit optical power of the optical module is normal. However, the display interface command output shows

Feb 16, 2026

Why Does an Interface Receive CRC Error Packets? What Should I

If an interface receives CRC error packets, link faults such as packet loss occur. Check the interface status, receive optical power of the optical module, and link quality.

Jan 05, 2026

Identify and Mitigate Defects Related to CRC Errors on UCS

Cisco recommends that you have reviewed FlexPod Common Performance Problems, especially Frame and Packet Loss in order to identify the source of unstamped CRC errors within the

Aug 22, 2025

Network Optics

There are some reasons which can cause CRC issue, such as the transceiver is not inserted tightly, the fibre or cable is twisted too much, the transceiver is unstable, or the hardware of this port is unstable

Aug 24, 2025

Troubleshooting CRC Error Packets on an Interface

If the transmission distance between two optical modules exceeds the maximum distance they support, alarms on low optical power will be generated even if the optical modules have the

Jun 06, 2026

Troubleshooting CRC Error Packets on an Interface (V200)

Check whether the local and remote interfaces use optical modules of different types from different vendors. If the optical modules have the same wavelength and the transmission distance between

Jun 28, 2025

Diagnosing and Solving Common Optical Transceiver Failures

Unlock insights into optical transceiver issues: docking failures, troubleshooting steps, and protective measures for optimal performance and longevity.

Jan 24, 2026

What you consider as "acceptable" CRC error rate? : r/networking

As mentioned by others, any packet loss will impact performance - create TCP retransmission (and thus streaming slowdowns), UDP timeouts (DNS - will wait seconds and then query the next server..),

Nov 28, 2025

Troubleshooting CRC Error Packets on an Interface

Remove and reinstall the optical fibers and optical modules and check whether the fiber connectors are damaged or contaminated, to determine whether the CRC error packets are caused by...
