

# Optical module MPO interface fiber optic

## Overview

MPO stands for Multi-Fiber Push-On. It is a high-density fiber optic connector widely used in data centers and FTTH applications. Female MPO: without guide pins. These connectors are found primarily in data center environments for consolidating multiple fibers in backbone cabling and supporting parallel optics applications that transmit and receive. Whether you're supporting parallel optics like 100G SR4 or densifying an optical distribution frame (ODF), MPO is now a cornerstone of network design. This article explains: And a practical checklist to design MPO systems that scale cleanly. If you only remember one thing: MPO is a multi-fiber. Optical Transmission Researcher, rich experience in solution design The MPO (Multi-fiber Push-On) connector functions as a high-density fiber optic connector that connects multiple fibers through its single precision-molded ferrule. It enables precise alignment of multiple fibers (8, 12, 24, or more) within a single interface, significantly increasing cabling density compared to traditional single-fiber connectors. This article introduces the key components and terms — from MT ①, MPO ②, MTP ③, multi-fiber optical module.
