

Optical module and fiber optic cable integrated 40g

Overview

The 40GBASE-LR4 optical module uses LC connectors, and it can reach a maximum transmission distance of 10km over single-mode fiber. The QSFP 40G LR4 optical module features 4 separate internal channels to transmit optical signals. The 40GBASE-LR4 optical module uses LC connectors, and it can reach a maximum transmission distance of 10km over single-mode fiber. The QSFP 40G LR4 optical module features 4 separate internal channels to transmit optical signals, each of which can perform transmission and receiving functions independently. It is important to note that these optica. For the 40G SR4 QSFP+ optical module, it adopts the 802.ba D3.2 standard, which defines the 40GBASE-SR4 module to use MPO/MTP connectors for 40G data transmission. 40GBASE-SR4 also uses 4 independent channels to transmit data, so its maximum transmission rate is the same as 40GBASE-LR4. The maximum transmission distance is 100m via OM3 multimode fi. The 40G LR4 PSM4 optical module involves optical/electrical connections and data digital diagnostic interfaces based on the QSFP+ multi-source protocol. 40G QSFP LR4 PSM module features a high level of integration and it has a higher port density, a feature that allows for more cost savings in data center operations. This module uses Parallel Singl. QSFP DAC is a high-speed cable with a transceiver combined at both ends. It is generally used in 40Gbps switches to connect to routers or servers. QSFP+ DACs are available in passive and active versions. Its maximum transmission distance is 7m, so it can only be used for short-distance 40Gbps data transmission. The two most common 40GDAC cables inc.
