

Optical splitter for 1-to-2 monitoring

Overview

A fiber optic splitter 1×2 is a passive optical device that takes a single input signal and divides it into two output signals. These splitters are widely used in point-to-multipoint configurations such as Fiber to the Home (FTTH), data centers, and enterprise LANs. T PON standards such as GPON, XGS-PON and new 25 and 50G standards. Whether it's for telecommunications, data centers, or fiber-to-the-home (FTTH) applications, this compact yet powerful device ensures that optical signals are split. Single 1×2, 1×4, 1×8 and Dual 1×2, 1×4 Passive Optical Splitters Distribution of an optical signal to multiple sources without the need for electrical conversion. 657A1 bend-insensitive fiber, it supports a wide 1260–1650nm wavelength range with low insertion and polarization loss.
