

# Protection settings for relay protection devices

## Overview

Protective device settings are the values at which the devices are configured to respond when certain conditions arise. PSM – Plug Setting Multiplier (Current Setting Multiplier) What is PSM?

2). They are intended to quickly identify a fault and isolate it so the balance of the system continue to run under normal conditions. The selection and applications of. Relion protection and control relays for several application reduce complexity. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor. Therefore, for normal system conditions, some tools such as demand – side management, load shedding, and soft motor starting can be applied to avoid overloads. One-line diagrams and detailed network data (lines, transformers, buses).
