

Rubber pads for distribution boxes

Overview

Transport mats are specially designed pads made of rubber granulate that are perfect for securing cargo during transportation. Thanks to their anti-slip properties and increased friction, the cargo does not slide during transport, reducing the risk of damage to the cargo or the vehicle. Choose from our selection of rubber pads, including over 14,400 products in a wide range of styles and sizes. Therefore, an assessment of the soil or subsoil by the customer or a soil analysis by a specialist or geotechnical expert regarding the load-bearing capacity of the soil or subsoil is strongly recommended before each use. These engineered pads are manufactured using high-quality rubber compounds reinforced with internal structures to withstand extreme pressure. Our rubber packaging products are designed to provide superior cushioning, insulation, and vibration dampening, ensuring your items remain secure and intact from start to finish. Choice of rubber deeply depends on the application, environment, and chemicals present.
