

Sealing of cable tray openings in exterior walls

Overview

Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with design requirements. WSP weatherstops are designed to seal penetrations of any type in walls or floors by cable tray, cable conduit, pipe and/or bus duct. The WSP system utilizes a powder coated or galvanized steel frame that encompasses the entire tray or duct at the point of penetration. An unsealed penetration allows rainwater and melting snow to track along the cable sheath directly into the wall cavity, leading to mold growth and structural. SLIPSIL Sealing Plugs are an ideal solution for the fire-safe, gas and / or watertight sealing of penetrations carrying single or multiple pipes. our solutions are easy to use and help you ensure safety, efficiency and operational reliability through all phases of your construction project.
