

Setting up Xiaozhi AI Server

Overview

This document provides instructions for deploying the xiaozhi-server platform. For setting up a local development. XiaoZhi AI is an open-source intelligent voice robot based on ESP32-S3 development, integrating wake word detection, AI conversation, device control, and multi-protocol communication capabilities. [com/xinnan-tech/xiaozhi-esp32-server](https://github.com/xinnan-tech/xiaozhi-esp32-server) to deploy a local server and establish a connection with the ESP32 S3 WROOM. If you encounter any bugs in the code during use, please submit an issue at. Use a mobile phone or computer to connect to the device's WiFi network: XiaoZhi-xxxxxx. Through this project, we aim to help more people get started with AI hardware development and understand how to implement rapidly evolving large language models in. This page guides you through the initial deployment of xiaozhi-server, from prerequisites to a running system. It covers the quickest paths to get both the manager-server (control plane) and backend-server (speech processing) operational, along with verification steps to confirm proper.
