

Solution Server Room Cold Aisle IP65

Overview

Products designed for cold aisle containment, such as doors, ceiling panels, and blanking panels, help maintain a stable, cool environment within the aisle, allowing data centres to operate more efficiently and sustainably. Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network. What is Cold Aisle Containment and how does it help energy efficiency?

Cold Aisle Containment isolates the cooled supply air from the cooling units within direct proximity of the air intake of critical equipment. An enormous amount of energy is used every day to maintain an acceptable intake. In order to efficiently ensure the necessary cooling, Rittal has developed three cooling variants for aisle containment. Intake air (cold) and waste air (hot) are unable to mix. This method raises the temperature of the air returning to a Computer Room Air Conditioner (CRAC) unit, which allows the unit to operate more efficiently.
