

Sudan Tunnel Power Distribution Box

Overview

WE-POWER developed the TDLB to withstand harsh conditions in accordance with BS6164, which provides useful guidance on voltages, equipment enclosures, cabling, electrical protection and lighting systems to be used in tunnels. Power supply and distribution in a tunnel Tunnels are home to a variety of applications that need to be supplied with power in a high-availability configuration. Particularly critical subsections, such as ventilation and lighting, must continue to work even in emergency situations, for example. This system (uninterruptible power supply (UPS), diesel generator.) supplies electricity to equipment critical for safety, during a limited period of time. In addition, through our involvement with many tunnel projects, we have acquired much practical experience in. The Tunnel Distribution & Lighting Box provides tunnel contractors with a complete solution for temporary electrical installation that complies with competent local authorities. Thanks! Waiting for your reply.
